

ATKS005

This is a medium-powered device that can pick up conversations/sounds within a 10 meter radius and transmit them to a dedicated VHF receiver or FM radio to a distance of up to 100 meters with good clarity. It is extremely simple to operate - just turn it on, tune it in, and you're away!

- Insert the batteries as shown in this Picture
- Then place in a quiet environment where your target is

- You then need to tune a AM/FM Radio to somewhere between 88 and 92 MHz
- You can play some music or make noise So when you tune the correct frequency You recognize the audio.
